SPACAR

No. 2019-1-LT01-KA202-060471

Intellectual Output: O1: Cutting Geometrical Solids with Planes.

Exercise number: 48

Title: Cutting the cylinder with 7 planes

Description:

The cylinder presented below has been cut with 7 planes – α , β , γ , δ , ϵ , ζ , η . Construct horizontal and profile projections (A3 size, scale 1:1), locate the position of planes yourself, give specific angles designed, use paper and pencil or /and computer software.

After drawings answer the questions below:

1. Is it possible that some of the planes will not mutually intersect with each other? If yes, why?
2. What types of sections correspond to each plane: circle, ellipse, rectangle?
3. Which planes form the cross-section and the longitudinal section of the cylinder?
What is the angle between these planes?
4. Which angle should be modified (and how) in order to change plane's section type from ellipse to circle?

Given digital files:

IO1-48-a.pdf: frontal projection of the cylinder and cutting planes

IO1-48-b.obj: 3D model of the given problem solved.

Result:

Frontal, horizontal and profile projections of the cylinder cut with 7 planes (A3 size, scale 1:1)

Answer to questions 1-4.

Prior knowledge:

Basic knowledge related to descriptive geometry, knowledge of geometrical surfaces.

Augmented reality content:

3D model of geometric solid cut with relevant cutting planes.
